# COMP8601: Probabilistic Method \& Randomized Algorithms 

# (Short name: Randomized Algorithms) 

Introduction

Instructor: Hubert Chan

3 Sep 2013

## Teaching Team

Instructor: Hubert Chan
Office: CYC 429
Email: hubert at cs.hku.hk
I check my email frequently!

Teaching Assistants

- Fei Chen (CYC LG101, fchen at cs.hku.hk)

Please use COMP8601 in subject.

## Why should one take this class?

- Interested in advanced algorithm design
- Learn probability tools to analyze uncertain situations
- Train analytical thinking
- Seek challenge in problem solving
- Preparation for further study

## Outcomes

[01 Abstract Concepts] Understand abstract mathematical concepts which are involved in designing advanced algorithms, e.g., probability theory, conditional expectation, Markov's inequality, measure concentration.
[O2 Problem Solving] Be able to apply abstract concepts in designing sophisticated algorithms to tackle various problems, e.g., MAX-CUT, MAX-3-SAT, Set Cover, PAC-learning.
[O3 Performance Analysis] Be able to apply formal reasoning to analyze the performance of algorithms, e.g., in terms of running time, space, failure probability, number of random bits, number of samples.
[O4 Independent and Lifelong Learning] Be inspired to learn independently and motivated to solve challenging problems.

## Class Overview

Content:

- Advanced Algorithm Techniques
- Emphasis on Probability Techniques
- Analysis of Randomized Algorithms

Style:

- Theoretical Computer Science
- Theorems and Proofs
- Rigorous, but not pedantic (we assume real numbers exist!)

## Teaching Style

Teaching medium: PC Tablet \& white/black board
You are strongly encouraged to take notes!

If there is anything you do not understand in class, please ask!

## Meeting Times

Lectures
$>$ Tue 10:30AM - 12:00PM MB121
$>$ Thu 10:30AM - 12:00PM MB141
$>$ Consultation Hours (1 to 1, optional)
> Fei Chen Tue 03:00PM - 04:00PM CYC LG101
$>$ Hubert Thu 12:00PM - 01:00PM CYC 429
(Please send email for other times.)

## Timetable

| Mon | Tue | Wed | Thu | Fri |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
|  | 10:30AM- <br> noon <br> [Lectures] |  | 10:30AM- <br> noon |  |
| $3-4[$ Fei ] |  | [Lectures] <br> noon[Hubert] |  |  |

- Outside consultation hours: by appointments

## Homepage

Students are suggested to visit the course homepage regularly
Homepage (Moodle):
http://www.cs.hku.hk/~c8601

Please send email if you need a prompt reply.

## Reference

No compulsory textbooks. Suggested extra reading:

- Randomized Algorithms, Motwani and Raghavan
- The Probabilistic Method, Alon and Spencer

Other Reference

- Class homepage in previous years 2009, 2010
- Similar classes taught in other universities

CMU http://www-2.cs.cmu.edu/afs/cs/academic/class/15859-f04/www
Washington http://www.cs.washington.edu/homes/jr//cs525/

- Google
- Wikipedia

## Assessment

3 -hour examination + in-course assessment

Examination: 50\%
In-course assessment: 50\%

- 4 homeworks: 25\%
- 1 mid-term: 25\%

## Assessment Criteria

- Understanding is the key point
- Notation and equations are the means to understanding the concepts, not the ends.

What is understanding of a concept?

1. Ability to express in one's own words.
2. Use the concept in applicable situations.

## Important Dates

Tentative homework deadlines:

- 12 Sep for Homework 1
- 10 Oct for Homework 2
- 14 Nov for Homework 3
- 28 Nov for Homework 4

Tentative mid-term date:
-22 Oct (right after reading week)

## Homeworks

Assignment Box: A7, CYC Building 3/F

Late Policy:
1 day late: 50\% penalty
2 days late: no marks will be given

- Assignments should be submitted before 7 pm on the due date.

## Plagiarism

Plagiarism is the action of using or copying someone else's idea or work and pretending that you thought of it or created it.

## First Attempt:

Students who admit committing plagiarism for the first time shall be warned in writing and receive a zero mark for the component concerned. For those who do not confess, the case would be referred to the Programme Director for consideration.

## Subsequent Attempt:

If students commit plagiarism more than once during the course of studies, the case shall be referred to the Programme Director for consideration. The Programme Director will investigate the case and consider referring it to the University Disciplinary Committee, which may impose any of the following penalties: a published reprimand, suspension of study for a period of time, fine, or expulsion from the University.

## But discussing with classmates is encouraged!

## Quick Survey

1. Probability
2. Random variables
3. Expectation
4. Conditional probability
5. Independence
6. Probability density function
7. Moment generating function $\phi(\mathrm{t})=\mathrm{E}\left[\mathrm{e}^{\mathrm{t} \mathrm{X}}\right]$
8. Chebyshev's Inequality
9. Chernoff Bound, Azuma's Inequality

## First Milestone: Measure Concentration

Suppose you flip a fair coin 1000 thousands times. How many heads do you expect to see?

The expectation of the number of heads $=500$. You would not expect to see exactly 500 heads.

However, you would be quite certain that the number of heads fall between 400 and 600.

We say that the number of heads is concentrated around its mean.

## What is probability?

1. Sample space $\Omega$ : possible outcomes. Flipping a coin: $\Omega=\{\mathrm{H}, \mathrm{T}\}$
2. Collection $\mathcal{F}$ of events. An event is a subset of $\Omega$.
(i) $\emptyset \in \mathcal{F}$
(ii) if $\mathrm{A} \in \mathcal{F}$, then $(\Omega \backslash \mathrm{A}) \in \mathcal{F}$
(iii) if $\mathrm{A}_{\mathrm{i}} \in \mathcal{F}$ for each positive integer i , then $\cup_{\mathrm{i}} \mathrm{A}_{\mathrm{i}} \in \mathcal{F}$
$\mathcal{F}=\{\emptyset,\{\mathrm{H}\},\{\mathrm{T}\},\{\mathrm{H}, \mathrm{T}\}\}$.
$\emptyset$ is an impossible event, e.g., getting a " 6 "
3. Probability function $\operatorname{Pr}: \mathcal{F} \rightarrow[0,1]$

$$
\text { (i) } \operatorname{Pr}(\Omega)=1
$$

(ii) For countable number of pairwise disjoint events $\mathrm{A}_{\mathrm{i}}$,

$$
\operatorname{Pr}\left(\cup_{\mathrm{i}} \mathrm{~A}_{\mathrm{i}}\right)=\sum_{\mathrm{i}} \operatorname{Pr}\left(\mathrm{~A}_{\mathrm{i}}\right) .
$$

## Some Properties

0 . If A is an event, $\overline{\mathrm{A}}$ is the complement event $\Omega \backslash \mathrm{A}$.

$$
\operatorname{Pr}(\Omega \backslash \mathrm{A})=1-\operatorname{Pr}(\mathrm{A}) .
$$

1. If $A$ and $B$ are events,

$$
\operatorname{Pr}(\mathrm{A} \cup \mathrm{~B})=\operatorname{Pr}(\mathrm{A})+\operatorname{Pr}(\mathrm{B})-\operatorname{Pr}(\mathrm{A} \cap \mathrm{~B})
$$

2. Union Bound. If $A_{0}, A_{1}, \ldots, A_{n-1}$ are events, $\operatorname{Pr}\left(\cup_{\mathrm{i}} \mathrm{A}_{\mathrm{i}}\right) \leq \sum_{\mathrm{i}} \operatorname{Pr}\left(\mathrm{A}_{\mathrm{i}}\right)$.

Notation: when there is no chance of confusion, $\cup_{i}$ means $\cup_{i \in[n]}$
$\sum_{i}$ means $\sum_{i \in[n]}$

## Independent Events

Two events $A$ and $B$ are independent if
$\operatorname{Pr}(\mathrm{A} \cap \mathrm{B})=\operatorname{Pr}(\mathrm{A}) \operatorname{Pr}(\mathrm{B})$

Do not confuse with:
Two events $A$ and $B$ are mutually exclusive if the are disjoint, i.e., $A \cap B=\emptyset$

## Conditional Probability

Suppose $A$ and $B$ are events such that $\operatorname{Pr}(B)>0$.
Then, $\operatorname{Pr}(A \mid B)=\operatorname{Pr}(A \cap B) / \operatorname{Pr}(B)$.

Example.
Rolling a die.
A is the event of obtaining a number larger than 3 $B$ is the event of getting an even number
$\operatorname{Pr}(A \mid B)=(2 / 6) /(1 / 2)=2 / 3$.

## Random Variable

A random variable $X$ is used to investigate quantities that we are interested in.
It assigns every point $\omega$ in the sample space a number $X(\omega)$.
Formally, it is a function $X: \Omega \rightarrow \mathbb{R}$.
Example. Rolling two dice. Interested in the sum. $\Omega=\{(\mathrm{i}, \mathrm{j}): 1 \leq \mathrm{i}, \mathrm{j} \leq 6\}$
$X(\mathrm{i}, \mathrm{j})=\mathrm{i}+\mathrm{j}$
$\operatorname{Pr}(X=0)=\operatorname{Pr}(\{\omega: X(\omega)=0\})$

## Different Kinds of Random Variables

- Discrete Random Variables
\{0,1\}-random variable
Integer-valued variables
- Continuous Random Variables

## Function of Random Variable

If $f: R \rightarrow R$ is a function and $X$ is a random variable, then $f(X)$ is also a random variable.

In particular, $f(X)(\omega)=f(X(\omega))$

## Expectation

The expectation or mean of a random variable is
Discrete: $\mathbb{E}[X]=\sum_{\omega} X(\omega) \operatorname{Pr}(\omega)$
Continuous: $E[X]=\int_{\omega} X(\omega) d \operatorname{Pr}(\omega)$
Most of the time, we focus on discrete case.
Useful equality, grouping terms (which points $\omega$ is mapped to $k$ by X ?):

$$
\begin{aligned}
\mathrm{E}[\mathrm{X}] & =\sum_{\omega} \mathrm{X}(\omega) \operatorname{Pr}(\omega)=\sum_{\mathrm{k}} \sum_{\omega: \mathrm{X}(\omega)=\mathrm{k}} \mathrm{X}(\omega) \operatorname{Pr}(\omega) \\
& =\sum_{\mathrm{k}} \sum_{\omega: \mathrm{X}(\omega)=\mathrm{k}} \mathrm{k} \operatorname{Pr}(\omega)=\sum_{\mathrm{k}} \mathrm{k} \operatorname{Pr}(\mathrm{X}=\mathrm{k})
\end{aligned}
$$

## Linearity of Expectation

If $X_{0}, X_{1}, \ldots, X_{n-1}$ are random variables (not necessarily independent), and $a_{0}, a_{1}, \ldots, a_{n-1}$ are numbers, then
$E\left[\sum_{i} a_{i} X_{i}\right]=\sum_{i} a_{i} E\left[X_{i}\right]$

## Independent Random Variables

The random variables $X_{0}, X_{1}, \ldots, X_{n-1}$ are independent if for all ranges of values $I_{1}, I_{2}, \ldots, I_{n-1}$,
$\operatorname{Pr}\left(\wedge_{\mathrm{i}} \mathrm{X}_{\mathrm{i}} \in \mathrm{I}_{\mathrm{i}}\right)=\prod_{\mathrm{i}} \operatorname{Pr}\left(\mathrm{X}_{\mathrm{i}} \in \mathrm{I}_{\mathrm{i}}\right)$
Notation: $\wedge$ means "and", "intersection"

Important Fact (homework):
If $X$ and $Y$ are independent random variables, then
$E[X Y]=E[X] E[Y]$.
Observe this is wrong: $E\left[X^{2}\right]=(E[X])^{2}$
